

To whom it may concern.....i am a paying subscriber to XM Satellite radio and being a long distance trucker i benefit greatly from their traffic and weather channels as well as the great variety of other channels they offer.Since this is a subscriber based service,i don't think the NAB or the FCC should be trying to alter these services in any way.The only person that should have control over what i hear is me.Since i am paying my hard earned money for it,it is a sure bet i want to hear it.I am respectfully urging the FCC to reject the NAB's petition 04-160 and support satellite radio's ability to provide the kind of programming that myself and others have paid for and continue to pay for.
